

## Opportunity for new director to join the board of SDCE

South Dartmoor Community Energy (SDCE) is an ambitious and professionally run, non-profit, community energy organization. We're led by a team of voluntary directors who have a passion to reduce fuel poverty and tackle the Climate Emergency. We aim to achieve this through providing domestic energy efficiency and retrofit advice, alongside our vision to develop community-led renewable energy generation schemes that provide a direct benefit to the local community.

We work in the South Hams in Devon. We're an active member of a network of community energy groups in Devon and work closely with our local authorities. Our current projects include continuing delivery of a free and impartial energy and retrofit support service across the South Hams and community engagement for a potential wind farm at Lee Moor.

### Why get involved with SDCE?

We have a strong track record of securing funding for ambitious projects and have maintained a consistent delivery since 2016. This is an exciting time of growth for the organisation, with demand for our services increasing dramatically.

SDCE is respected and trusted, with strong links locally and nationally within the renewable energy and fuel poverty sectors. At SDCE you will have an opportunity to make a big impact on local energy projects, which can be replicated nationally.

You'll have the opportunity to attend conferences and networking events representing SDCE. If you've never been on a voluntary board of directors before, you will learn many new transferable skills, and be able to challenge yourself taking on new projects. SDCE is part of the green economy - we are creating local green jobs and raising the profile of community energy.

### Person Spec

We're looking for someone with time to give to technical community energy projects which tackle the climate emergency. You will be needed to contribute to decision making discussions for approximately 1 hour per week. Some weeks the time requirement will be higher (when we have board meetings or big projects to discuss).

Ideally you will have skills and experience in renewable energy or energy efficiency. You will be passionate about tackling the climate emergency and put people and planet before profit. You must be a dedicated team member and excellent communicator, willing to take on responsibility for tasks and actions. We'd love somebody who has a positive and uplifting attitude, we want our work to be fun as well as impactful!

What else could you bring? A wish list:

- Financial modelling
- Accountancy
- Business management

It is essential that you read and agree to support our organisational Rules.
